## APPENDIX A

The ADEPTEC controller card is used to control the internal hard disk and any external devices from the Series III. This controller board is found on the same board as the SCSI drive.

Below is description of how to remove the internal Series III resistors to allow the external terminator plug to be used. This is only necessary if your CMI Series III did not come with the external terminator plug.

```
                    ADEPTEC Controller Card
 DC Power                  ABC4000
 Connector

      BDFHJLNP
      * * * * * * * *
      * * * * * * * *                          74LS240N
      ACEGIKMO        J5           RP3
                                         Resistor Pack

  J1

  J0                         74LS240N

                              RP4
```

Diagram of the Adeptec Controller Card

The controller card is located beside the internal Series III hard disk. To gain access to this card, remove the right hand side of the Series III. The resistor packs marked PR3 and PR4 are used to terminate the SCSI signals.

Once removed, place the Terminator Plug supplied with the WORM drive on the last SCSI device in the chain of SCSI devices. If only one SCSI device is used (e.g the WORM drive) then the terminator plug must still be used at the output terminator. If no SCSI devices are used, then the terminator plug must be placed on the SCSI port of the Series III.
